

# NPO Health Checkup™

The market correction we are experiencing now can be a golden opportunity for you to gain a sustainable competitive edge. It is the perfect time to reassess and recommit to your goals, refine your internal processes, improve services and strengthen your financial position.

The NPO Health Checkup™ is an assessment tool used by Brown Smith Wallace to help organizations analyze their opportunities for:

- Cost Control and Reduction
- Process Improvement
- Financial Analysis and Structuring

This thorough assessment enables you to emerge from these challenging times stronger, leaner and positioned for success. We will help you globally assess your operations and evaluate current trends while comparing operational and financial ratios.

After the assessment, this information will be used to develop a customized action plan for your organization. You'll gain an understanding of possible causes of potential problems, analyze a variety of corrective actions, and determine which solutions are the most feasible and likely to be effective for your situation.

The NPO Health Checkup™ requires 45-60 minutes to complete and is available in Microsoft version 2003 or 2007.

There may be other areas of business operations that could be streamlined as a result of in-depth analysis and evaluation, particularly in this economically stressed market. Our NPO Health Checkup™ is just one of many "recession services" offered by Brown Smith Wallace to assist organizations and businesses in their improvement efforts.
